Hiring Team
Anthropic
San Francisco, CA

Re: Application for Infrastructure Engineer, Sandboxing

Dear Anthropic Hiring Team,

I am applying for the Infrastructure Engineer, Sandboxing role. I am a Senior Cloud Infrastructure Engineer with eight years of experience operating production infrastructure across GCP, AWS, Azure, and Huawei Cloud, including current work building a regulated multi-tenant Core Banking as a Service platform on Google Cloud.

The strongest alignment to your role is my recent GCP platform engineering at 9jaPay. I led the migration of nine banking microservices from Huawei Kubernetes to a multi-tenant GCP architecture — designing a 15-state Terraform monorepo across Shared VPC landing zones, AlloyDB on Private Service Access with CMEK and cross-region failover, Cloud Run v2 with internal-only ingress and Direct VPC Egress, GitHub Actions CI/CD with Workload Identity Federation for keyless deploys, and PCI-scoped controls throughout. The work is multi-tenant by design, security-bounded by regulatory requirement, and operationally demanding — patterns I understand carry forward to the sandboxing problem you are solving.

Adjacent strengths: at Insomnia-Labs I have done container-security hardening across production EKS clusters (IRSA, External Secrets Operator, Kubernetes NetworkPolicies, Pod Security Standards, Trivy image scanning in CI), and led production incident response for cluster-wide outages with full root-cause analysis and zero-downtime cutover. I have also published peer-reviewed work on cloud infrastructure economics (Zenodo, 2025).

I should be honest about where I am stretching. The Linux internals depth your role calls for — namespaces, cgroups, seccomp at the kernel-runtime level — is adjacent to my work, not the core of it. My background is GCP platform engineering, container security, and regulated multi-tenant infrastructure. If those are the strengths Anthropic is willing to invest in for someone who can grow into the deeper sandboxing layer, I would welcome the conversation.

On logistics: I am based in Lagos, Nigeria. I noted Anthropic does sponsor visas where the right candidate justifies the effort. I am open to discussing relocation to San Francisco, New York, or Seattle if there is mutual interest.

My CV is attached. Thank you for your consideration.

Kind regards,

Unuane Godspower Ozimede

Senior Cloud Infrastructure Engineer
